Boost learning ability with music

MUSIC is as natural to children as breathing, eating and sleeping. Every child can enjoy rhythm and most take great delight in creating different sounds, either with an instrument (formal or improvised) or with their voices.

Researchers in the United States, Hungary, Switzerland and the UK have come to the conclusion that learning through and with music is much more readily absorbed by children and transfers to the long-term memory better. It has been shown to have a positive effect on:

- reading ability
- ability in maths, science and engineering
- speech fluency
- team working and social skills
- memorising capacity
- time management skills
- learning ability
- problem solving ability
- ability to handle stress
- artistic ability
- neatness

Sing to your baby and with your children, encourage musicality and you are giving them a gift for life.

For boys as well as for girls, it's worth enduring and encouraging the painful early stages of learning an instrument and you will give them a skill which will always be a source of pleasure and comfort, as well as an essential, brain-boosting help to midnight revision sessions.
